

ABSTRACT OF THE DISCLOSURE

A hanger label (1) which is suitable in particular for hanging infusion bottles. The label (1) has a stretchable hanger (2b) and a region (2a) that can be applied to the surface (6). The stretchability of the hanger (2b) is limited in some section to prevent tearing of the hanger (2b) in critical locations, in particular at the suspension points. This improves the functional reliability of the hanger label (1).
